

Global Inflation Data Analysis - Power BI Project

Team ID: LTVIP2025TMID198

Name: Bhetanabhotla Surya Narayana Murthy

Email: suryamurthy760@gmail.com

Project Overview

This Power BI project is designed to analyze and visualize global inflation data across multiple countries and years. The dataset provides valuable insights into inflation trends by country, indicator type, and inflation category, helping users understand inflation patterns and make informed economic decisions.

Objective

The primary objective of this project is to:

- Analyze historical inflation data for different countries.
- Categorize inflation trends into various levels.
- Provide an interactive dashboard for effective data visualization and exploration.
- Help policymakers, analysts, and researchers understand inflation patterns worldwide.

Data Sources

The dataset used in this project includes:

1. **Dataset Name:** [global_inflation_data](#)
2. **Attributes:**
 - country_name - Name of the country
 - indicator_name - Type of inflation indicator (Annual average inflation, consumer price rate, etc.)
 - Inflation Category - Classification of inflation levels (Low, Moderate, High, etc.)
 - Value - Inflation rate (raw values)
 - Adjusted Inflation Rate - Adjusted inflation rate after specific calculations
 - Avg_Inflation_Rate - Computed average inflation rate

Data Analysis and Insights

Key Findings:

- The dataset consists of global inflation rates recorded over multiple years.
- Countries are categorized based on different inflation levels.
- The inflation data helps identify trends such as periods of high inflation, economic stability, and potential risk zones.
- The dataset covers annual average inflation rates across different time periods, providing a comprehensive view of global inflation dynamics.

Power BI Dashboard Features

- **Interactive Filters:** Users can filter data by year, country, and inflation category.
- **Trend Analysis:** Time series visualization of inflation rates over the years.
- **Geographical Analysis:** Heatmaps and country-wise comparisons to track inflation trends globally.
- **KPIs and Metrics:** Average inflation rates, highest and lowest inflation records, and inflation trends.

Implementation Steps

1. **Data Loading:** Import the global_inflation_data dataset into Power BI.
2. **Data Cleaning & Transformation:**
 - Handle missing values.
 - Convert data types appropriately.
 - Create calculated columns (e.g., Adjusted Inflation Rate).
3. **Data Modeling:** Establish relationships between attributes to enhance analysis.
4. **Dashboard Development:**
 - Build interactive visualizations including line charts, bar charts, and maps.
 - Apply slicers for better data exploration.
 - Implement measures and KPIs for insightful analysis.
5. **Testing & Validation:** Ensure the accuracy of calculated metrics and visualizations.
6. **Deployment & Sharing:** Publish the dashboard for stakeholders and users.

Conclusion

This Power BI project effectively visualizes and analyzes global inflation data, offering valuable insights into economic trends. The interactive dashboard enables users to explore inflation data by country, category, and year, aiding in decision-making and research.

Future Enhancements

- Integration of real-time inflation data updates.
- Addition of economic indicators like GDP and interest rates for a more comprehensive analysis.
- Advanced predictive analytics using machine learning models to forecast future inflation trends.

Project Files

- **Power BI File:** [inflation.pbix](#)

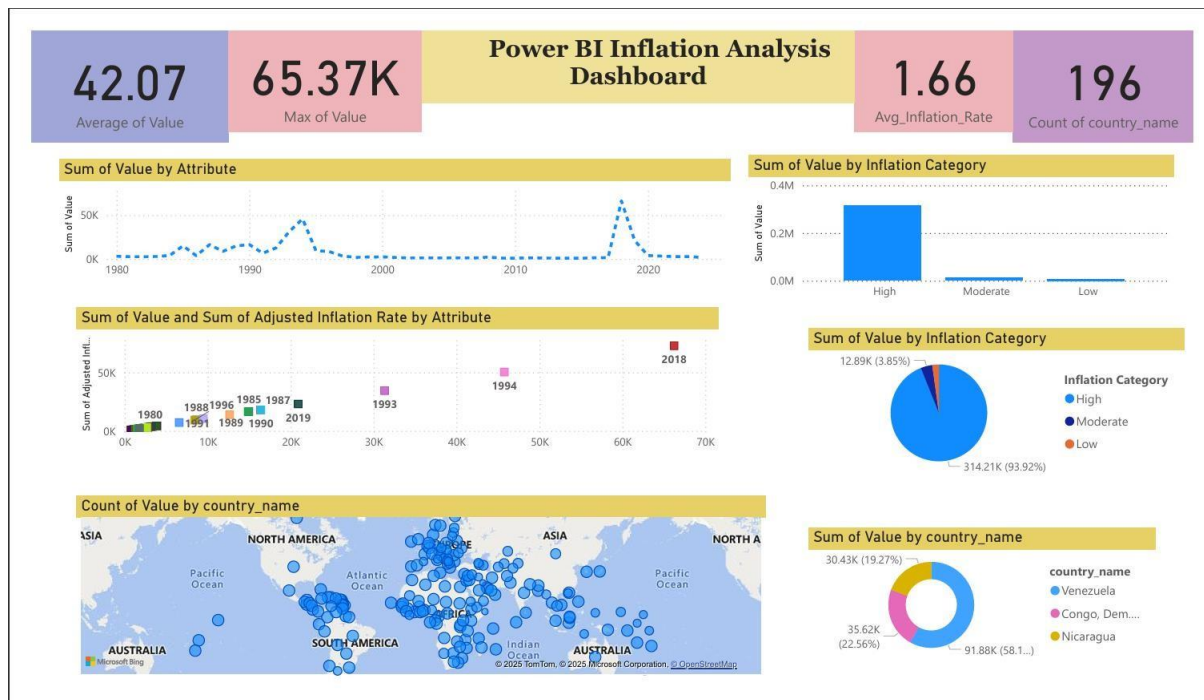

Fig 1: Power BI Main Dashboard – Inflation Analysis

1. Power BI Inflation Analysis Dashboard (Fig 1)

Key Metrics Displayed on Top:

- **42.07 (Average of Value):** The average inflation rate across all data points.
- **65.37K (Max of Value):** The highest inflation value recorded.
- **1.66 (Avg_Inflation_Rate):** The average inflation rate based on adjusted calculations.
- **196 (Count of country_name):** The number of countries included in the dataset.

Visualizations and Insights:

1. Sum of Value by Attribute (Line Chart)

- Shows inflation trends over time.
- Highlights inflation fluctuations, with noticeable peaks around 1990 and 2020.

2. Sum of Value by Inflation Category (Bar Chart)

- Categorizes inflation levels into High, Moderate, and Low.
- High inflation has the most significant share.

3. Sum of Value and Sum of Adjusted Inflation Rate by Attribute (Scatter Plot)

- Plots inflation values against the adjusted inflation rate.
- Highlights key years with significant inflation variations.

4. Count of Value by Country (Geographical Map)

- Provides a global view of inflation trends.
- Displays country-wise inflation concentration using mapped points.

5. Sum of Value by Inflation Category (Pie Chart)

- Shows that High inflation dominates (93.92% of total sum), with minimal representation of Low and Moderate categories.

6. Sum of Value by Country Name (Donut Chart)

- Identifies top contributors to inflation.
- Venezuela, Congo, and Nicaragua are the leading countries with the highest inflation values.

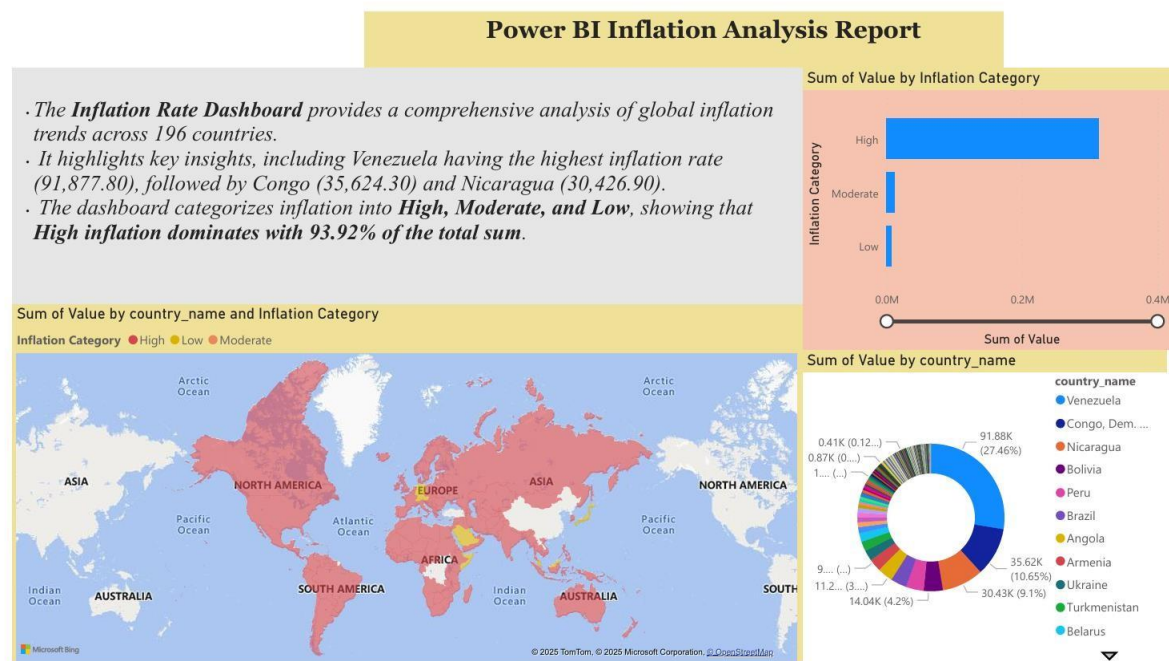

Fig 2: Power BI Inflation Analysis Report

2. Power BI Inflation Analysis Report (Fig 2)

This dashboard serves as a summarized **report** of inflation insights, focusing on key trends and highlights.

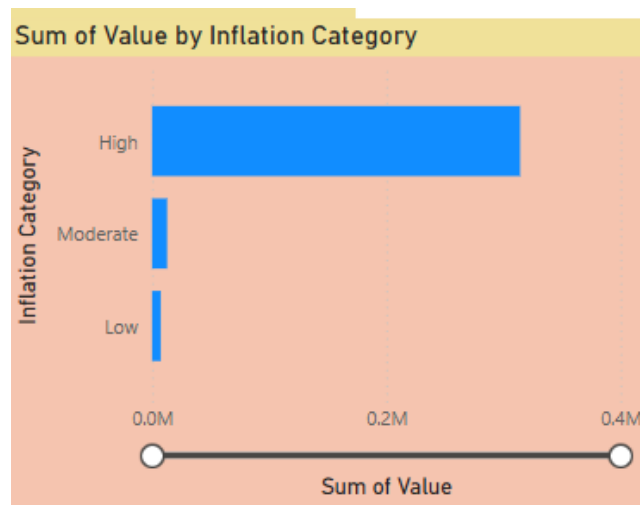

Highlighted Insights:

- The **Inflation Rate Dashboard** provides a **global inflation analysis across 196 countries.**
- **Venezuela** has the **highest inflation rate (91,877.80)**, followed by **Congo (35,624.30)** and **Nicaragua (30,426.90).**
- Inflation is classified into **High, Moderate, and Low**, with **High inflation dominating 93.92% of the total sum.**

Visualizations and Insights:

1. Sum of Value by Inflation Category (Bar Chart)

- Reinforces that high inflation is the dominant category.
- Moderate and low inflation categories have significantly lower values.

2. Sum of Value by Country and Inflation Category (Map)

- Displays a heatmap of inflation distribution.
- Most regions in **South America, Africa, and parts of Asia** are marked with high inflation.

3. Sum of Value by Country Name (Pie Chart)

- Identifies the top countries with the highest inflation rates.
- Venezuela, Congo, Nicaragua, and Bolivia lead the inflation statistics.

Sum of Value by country_name
